(54) Title: PEER TO PEER SOFTWARE DISTRIBUTION SYSTEM

(57) Abstract: Software packages may be distributed to a plurality of clients in a network by initially distributing the software from a server to one or more clients. Those clients may then be enabled to forward the software package on to other clients contained in a list of addressee clients. Each client that receives the software package may then be called upon, in turn, to forward the software package to additional clients on the list. In this way, the load on the network management server, related to the distribution of software to a large number of clients in a network, may be reduced.
